

KaVo Spray®

One for all.

KaVo. Dental Excellence.

Proper maintenance with KaVo Spray saves time, money and hassle.

The KaVo Spray system helps your daily surgery routine without environmental damage. Your valuable and precision made KaVo instruments and handpiece attachments are simultaneously cared for and protected. The spray lubricant and cleanser are propelled to exactly the right areas where lubrication and cleaning are regularly required.

This is achieved without any CFC's (chlorofluorocarbons). In addition, the KaVo Spray intensive care system also offers:

1. Economical 500 ml contents with almost double the amount of previous cans of spray.
2. Now only one type of spray for all KaVo DMI instruments! Turbines, air-motors, shanks and heads. All perfectly cleaned and lubricated, with the KaVo Spray formula.
3. The two re-usable spray nozzles (Multiflex and Quick) can be interchanged on one spray can. This is not only easy on the purse strings but environmentally friendly. No unnecessary discarding of the spray nozzles and caps.

Technical Data:
KaVo Cleaning Spray with an "ozone friendly" propellant.

KaVo Spray · Single bottle, blue marking · contents 500 ml · non-CFC propellant · for cleansing and lubrication of all KaVo DMI products · without spray nozzle; supplied in cartons containing 6 bottles · 2112 · 411 9630
